Flexible BNC Coaxial Cable, BNC Male to BNC Male

CA3124

Description

These BNC cables are a thinner alternative to the standard RG-58 type cables. RG-174 cable is 0.1" in diameter and very flexible, making these cables ideal for smaller setups where thicker cables become awkward. These cables are often used for low frequency applications all the way down to DC. The cables are compliant with very little shape memory.
